

LJ170

Planing cutterhead with a split cutting edge

Features - benefits

- » cutterhead made from light aluminum alloy
- » equipped with double-edged HM knives
- » customer chooses type of HM knives (for wood, universal, for wood boards) according to material processed
- » special spiral arrangement of HM tips
- » arrangement of HM tips decreases cutting resistance and enables to achieve very good quality of processed surface
- » cutterhead adjusted to work with high rotations and feed values
- » offer includes cutterheads made to order according to technical drawing or model piece

Application

- » milling of curved planes and surfaces with high and irregular machining allowances
- » cutters used in bottom spindle milling machines, tracing and pattern machines, multi-head planers with mechanical feed
- » cutterhead adjusted for processing of dry raw wood
