

LS232

Solid carbide router bits (T-shaped) for cleaning of PVC corners

Features - benefits

solid carbide router bits - body and working part made of sintered carbide
possibility of making router bits in diameters from 6 to 20 mm, with different overall length and different length of working part
special geometry of the blade allows to easily remove chips and to obtain a smooth surface of processed material
possibility to produce router bits made of sintered carbide of increased strength and impact strength characterized by the ULTRA NANO GRAIN

Application

specialized router bits which carry out the cleaning process of the inner side of the PVC window corner
router bit which has the task of deburring after welding PVC profiles
router bits dedicated to specialized machines for the production of plastic joinery (ie. elumatec, EMMEGI, ROTOX, FIMTEC, PREZ-MET, PRESSTA EISELE, URBAN, WEGOMA, etc.)
feeds from 2 to 12 m/min - depending on the diameter of the tool and the type of processed material
