

PM010

Friction saw blades

Features - benefits

made from CrV steel
 thanks to proper heat treatment (hardening and tempering) saw blades have optimal hardness and material structure
 specially designed teeth geometry for cutting of steel profiles and sheetes
 special technology of fast cutting of steel elements

Application

cutting of pipes, bars and sections in production of steel constructions
 used for cutting of steel elements eg. platform grating
 saw blades can be used only on special high speed cut-off machines with cutting speed 90 - 120m/s without cooling necessity
