

PX110

Bi-metal band saw blades METAL PROF-CUT PLUS type for metal cutting

Features - benefits

bimetal band
tooth tips made from high quality high speed steel M42 with 8% cobalt content (pressed powders) ensure tool's longevity
properly selected teeth shape and geometry guarantees high efficiency and quality of cut surfaced
body from spring steel ensures appropriate flexibility
welding performed on modern machines ensuring high durability

Application

designed for production cutting of most of materials types: from aluminum to nonferrous metals
especially recommended for cutting of high alloy steels and materials that are difficult to machine
depending on teeth pitch blade is used for cutting of full materials, pipes and profiles work on band saws
