

PS603

HM saw blades MITER 3 -SPECIAL WOOD / CHIPBOARD- series for miter saws

Features - benefits

- » special teeth geometry 3GS5 (alternate top bevel) enables cutting of different materials with wide range of cross-sections - from 10mm up to 130mm - dependent on saw blade diameter
- » HARD carbide tips (ULTRAFINE) with hardness of 1.950 HV ensure longer life time
- » thin kerf and disc give the feeling of easy saw blade operating while cutting
- » saw blades produced as industrial saw blades where the deviation from nominal size does not exceed hundredths of millimeter
- » use of high quality tool steel as well as specialized disc tensioning technology guarantees proper saw blade rigidity while operation
- » sharpening process performed on CNC sharpening machines with specially chosen grinding wheel and sharpening parameters
- » designed compensation slots increase warp resistance due to high temperature and load

Application

- » for fast cutting of soft and hard wood with perfect quality of processed surface
- » cutting quality dependent on feed value
- » cutting of wood-based materials like chipboard, plywood, MDF, HDF
- » cutting of frames and counter frames, door frames made from MDF and hard wood, hard wood: stairs etc., soft wood - boards, logs, battens etc.
- » angled, mitre and straight cutting, grooving
- » used in mitre, radial arm and table saws
- » in order to obtain the best possible surface finish and with a view to a safe cutting process, it is necessary to apply the correct clamping pressure - the workpiece/piece should be fixed in a clamping fixture, e.g. a clamping bench or workbench

INFO:

Miter saws available on the market can be modified by their producers. That is why we request you to check the miter saw you have before purchase of particular saw blade (especially important to check outer diameter and bore).
