

GT605

GLOTECH - Carbide-tipped blades (GS) for cutting wood - for hand saws

New

Features - benefits

- » profiled shape of the GS 15 tooth blade (alternately inclined teeth)
- » thin disc kerf means lower cutting resistance
- » sharpening process carried out on numerically controlled CNC sharpening machines
- » sharp edges of sintered carbide teeth
- » designed compensation grooves reduce the operating temperature and eliminate its impact on disc body
- » typical size range in diameters from 160 to 210 mm, adapted to most power tools on the market

Application

- » saws dedicated to DIY enthusiasts, hobbyists and home use
- » discs for standard work when turning/cutting wood
- » cutting elements made of solid soft and hard wood, glued wood, carpentry boards, plywood, etc.
- » cutting with a disc allows you to maintain good quality of the processed wood
- » having the ability to adjust the rotational speed in a hand saw, it should be adapted to the type or type of material being cut
- » can also be used in small machines / stationary saws or small miter saws
