

PS607

HM saw blades POWER PLUS 4 -BUILD- series for power tools

Bestseller

Features - benefits

- » thin kerf and disc guarantee less cutting resistance which greatly facilitates plunging of the tool into cutting material
- » multi spline hole - a new type of fixing makes putting the saw blade on the clamping sleeve easier, in case of any dirt (dust) enables proper putting and setting of the saw in relation to the shaft and clamping
- » sintered carbide guarantees long life and enables multiple sharpening
- » disc made of thermally improved high-quality steel equals balanced surface hardness and high stiffness of the tool
- » sharpening process implemented on numerically controlled CNC grinders with preservation of specific grinding wheel parameters provides very sharp edges
- » wide range of diameters from 160 to 230 mm, suitable for most power tools on the market

Application

- » saw blade perfect for general construction works on the construction site and for universal use
- » dedicated for cutting of wood with metallic inclusions i.e. nails, staples, etc.
- » special construction of the saw blade enables cutting of solid wood, construction wood (i.e. shuttering boards) and wood-based materials coated with construction mortar residues
- » can also be used in stationary machines
- » in order to obtain the best possible surface finish and with a view to a safe cutting process, it is necessary to apply the correct clamping pressure - the workpiece/piece should be fixed in a clamping fixture, e.g. a clamping bench or workbench

INFO:

Producers of sawing machines can modify their products during the validity of this offer. Therefore we request you to check the type of sawing machine before order placing (especially outer diameter and bore diameter).
