FP110 HSS saw blades AKU 2 -UNIVERSAL- series for cordless power tools

Features - benefits

- disc made of high quality high speed steel HSS-DMo5 (SW7M) heat treated in vacuum oven equals uniform surface hardness (62-64 HRC) and high tool stiffness
- the sharpening process carried out on numerically controlled CNC sharpening machines with preserving certain operating parameters of the grinding wheel, ensures extremely sharp edges of the tool
- HSS circular saw blades with thin discs are featured with high stiffness and uniform hardness of the body - this results in lightness of the tool operation and reduces power consumption
- centrifugal convergent saw
- very good quality of surface cut

Application

- universal HSS circular saw blades for all standard operations on wood and other wood derived materials
- cross cutting of wood, cutting of wood based materials (board, plywood, MDF)
- enables cutting of wood with metal inserts (i.e. nails, staples, rivets, etc.)
- also used for cutting of non-ferrous metals, including aluminum
- specially profiled tooth shape in triangular geometry A, allows good quality of material cut
- for the smallest cordless power tools with revolutions not exceeding 2000 rpm
- in order to obtain the best possible surface finish and with a view to a safe cutting process, it is necessary to apply the correct clamping pressure - the workpiece/piece should be fixed in a clamping fixture, e.g. a clamping bench or workbench
