

GT810

GLOTECH Steel - Carbide-tipped blades (GC) for constructional steel - for steel cutting machines

New

Features - benefits

- » cemented carbide dedicated to cutting steel profiles with increased cobalt content
- » profiled GC10 tooth shape (flat teeth with alternately chamfered corners - positive teeth)
- » sharp edges of carbide teeth
- » sharpening process carried out on numerically controlled CNC sharpening machines
- » super-thin blade kerf means less cutting resistance
- » designed compensation grooves reduce the operating temperature and eliminate its impact on the blade body
- » standard size range adapted to the most popular diameters of low-speed steel cutting saws

Application

- » blades designed for demanding craftsmen, construction companies, domestic users, DIY enthusiasts and hobbyists
- » for cutting cold-rolled steel sections made of non-alloy structural steel with a wall thickness of less than 3 mm
- » can be used to cut sandwich panels (filled with polyurethane foam or polystyrene) with saw diameters ranging from 305 mm to 355 mm
- » used in cutters/mitre saws designed for cutting steel (at appropriate parameters/speeds)
- » when using saws for cutting steel, remember to use the optimal operating parameters, depending on the saw diameter: 305 mm (1,250 - 1,600 rpm), 355 mm (1,050 - 1,350 rpm)
- » in order to obtain the best possible surface finish and with a view to a safe cutting process, it is necessary to apply the correct clamping pressure - the workpiece/piece should be fixed in a clamping fixture, e.g. a clamping bench or workbench
