

PS661

HM saw blades ZAGeasy CHIPBOARD series saw blades for plunge saws

New

Features - benefits

- » cemented carbide with increased hardness contributes to a longer blade service life and a higher number of cuts
- » saws with HM-GA insert geometry (TCG - trapezoidal-flat teeth)
- » due to the high hardness of the carbides, they are sharpened on CNC-controlled sharpening machines whilst maintaining specific grinding wheel operating parameters
- » can also be used in stationary machines and popular hand-held saws

Application

- » for precise cutting and scoring (grooving) of wood-based materials such as chipboard, laminate, MDF, etc.
- » most commonly used when cutting laminated furniture boards, floor panels, making cut-outs in kitchen worktops and grooving
- » when selecting a specific saw for a planned cutting operation, attention should be paid not only to the type of material being worked on but also to its dimensions, i.e., thickness, cross-section or, in the case of cutting profiled strips, wall thickness
- » the maximum cutting height or depth depends on the model of plunge saw from the respective manufacturer
- » to achieve the best possible surface finish and ensure a safe cutting process, it is essential to apply the correct clamping force - the workpiece should be securely held in a clamping device, e.g. a clamping jaw or on a workbench

INFO:

Producers of plunge saws may modify their products within the validity of the offer for Globus tools. That is the reason why we request you to check the type of plunge saw (especially external and internal diameter -bore diameter) before purchase of particular saw blade.
