

LV840P

Coated solid carbide finishing end mills, Z4 positive - for machining steel and metals

New

Features - benefits

solid carbide cutters with PVD coating - body and cutting edge made of cemented carbide
 perfectly matched chip groove shape and rake angle, which facilitate chip evacuation
 cutters available in diameters from 3 mm to 20 mm, with varying overall lengths and cutting edge lengths
 used on high-performance CNC machining centres with mechanical feed
 cutters can be manufactured in roughing and/or ball-end versions, and for machining steel with a hardness of 55 HRC and 60 HRC

Application

designed for milling materials with a hardness of up to 45 HRC on the Rockwell scale
 - workpiece materials: steel, cast iron, stainless steel
 four-fluted shank milling cutter = Z4 (4 flutes)
 the special cutting edge geometry and spiral arrangement allow for easy chip evacuation and a smooth surface finish on the workpiece
 the hardfacing coating used (AlTiN - aluminium and titanium nitride - 3,400 HV)
 significantly increases tool life during metal cutting
