

PT140

Saw blades WA for soft wood ripping

Features - benefits

- » saws made from high quality, thermally improved steel
- » laser cutting technology results in very precise disc execution
- » due to heavy and unstable working conditions saw blades are also made with special heat compensating grooves and special slots
- » compensation slots ensures proper disc cooling and therefore increase its rigidity
- » regular and symmetric teeth setting - standard saw blades made in sharpened and set version

Application

- » saws with teeth grouping (HANIBAL) designed for soft wood ripping (cutting wood along the grain)
- » saws used mostly on double-blade circular saws, often used on multi rip saws
