

PT150

Saw blades KB for soft and hard wood cross cutting

Features - benefits

- » saws made from high quality, thermally improved steel
- » laser cutting technology results in very precise disc execution
- » due to heavy and unstable working conditions saw blades are also made with special heat compensating grooves and special slots
- » compensation slots ensures proper disc cooling and therefore increase its rigidity
- » regular and symmetric teeth setting - standard saw blades made in sharpened and set version

Application

- » dedicated to soft and hard wood cross cutting (cutting wood across the grain)
- » often used for firewood cutting
- » used on popular circular saws and other stationary machines
