

PA800

Wide band saw blades stellite - to order

Features - benefits

- » stellite saws are made of materials such as: German Steel, Uddeholm and alloy steel
- » wide stellite band saws are produced in a version with one-sided or double-sided teeth
- » in the case of work with double-sided teeth saws cutting efficiency is increased (no idle runs)
- » hardness of the saw body is 44-46 HRC and hardness of the stellite blade 49-51 HRC
- » the advantage of the stellite saws is that foreign objects in raw material sawn to a thickness of 1 mm do not damage the teeth blades
- » range of available dimensional parameters to be made - length: 1000-10700mm, width: 80-230mm, thickness: 1.0-1.8mm, tooth pitch (t): 22.2-45mm

Application

- » designed for wiping round, raw wood and prisms
- » especially recommended for cutting frozen wood, fresh soft and hard wood as well as exotic wood (e.g. with mineral inclusions)
- » recommended use of stellite saws: 3-4 hours of cutting + 12 hours of rest
- » saws require intensive cooling during the cutting process to avoid overheating
